

ABSTRACT OF THE DISCLOSURE

Foamed composition comprising: 100 parts by weight elastomeric polymer (A), comprising monomeric units of ethylene and an α -olefin, 1-50 parts by weight olefinic polymer (B), and further comprising 98 - 65 weight % monomeric units of ethylene; and 2-35 weight % monomeric units of an alpha-olefin having 4-12 carbon atoms, polymer B having a density of 880-915 kg/m³. The composition shows a very good foam structure.
